- Guaranteed amount at maturity date: 75% (by CIC) ;
- Investment maturity: 5 years (maturity date 30/06/2026).

Dealers : CIC and Banque de Luxembourg

This document should be read together with the key information document.

Alternative investments within Crédit Mutuel Alliance Fédérale

CIC Marchés and Cigogne Management S.A. (respectively the capital markets division and the alternative investment company of Crédit Mutuel Alliance Fédérale – head quarter of CIC) are historically important and well-known actors of the alternative investment industry.

In addition to traditional financial investments, alternative investment allows investors to target a performance de-correlated from traditional asset classes (stocks, bonds). Resorting to arbitrage strategies benefiting from market inefficiencies, alternative investment becomes the natural complement to a traditional asset allocation.

With 30 years of experience in this field, CIC Marchés develops a variety of relative value arbitrage strategies such as :

- Asset Backed Securities and Covered Bonds arbitrage (ABS / MBS, CLO),
- Convertible Bonds arbitrage,
- Corporate Credit arbitrage,
- Fixed Income arbitrage,
- Mergers and Acquisitions (« M&A ») arbitrage,

The aforementioned expertise is replicated in **Guaranteed Note Stork DMS 5Y 75% 06/2026 (the “Note”)**.

Together with a CPPI (Constant Proportion Portfolio Insurance) approach which will in turn allow for the 75% notional guarantee at maturity date, the underlying Stork Fund Dynamic Multi-Strategies (« Stork DMS ») links the expertise gained by CIC Marchés in the alternative investments field to a rigorous portfolio and risk management approach developed by Cigogne Management. Stork DMS' allocation as at 31/03/2021 is outlined here-below:

CPPI principles and underlying's description

Focus on CPPI principles

The CPPI principles consist in a dynamic allocation mechanism, adjusting on a regular basis the Note exposure to the underlying fund (risky asset) and the note's exposure to a monetary placement (riskless asset). The CPPI aims at optimizing the performance of the underlying and guaranteeing the notional amount at maturity. A cushion (being the portion of the Note's assets to be invested in the underlying fund without attempting to the protection of the notional amount at maturity) is first calculated.

A multiplication factor ('Multiple'), based on the volatility of the underlying fund is determined to optimize the exposure to the underlying. At the issue date, the exposure to the Stork DMS fund will be 100%.

The adjustment of the indexation will then be dynamic, depending on the evolution of the underlying fund: the better the performance of the underlying fund the more the exposure to the fund will grow (the exposure to the Stork DMS fund may therefore reach a maximum of 120%). Conversely, negative performances of the underlying could lead to a reduction of the exposure. The exposure to the underlying could be reduced up to a level where the EMTN would only have a monetary component so as to guarantee the notional amount at maturity date.

Description of the underlying

The note is indexed to the class A-Share of the Stork DMS.

The investment objective of the fund of funds "Stork Fund - Dynamic Multi-Strategies" is to deliver consistent positive performance, regardless of market developments.

To achieve this objective, the fund of funds "Stork Fund - Dynamic Multi-Strategies" sets up arbitrage strategies in different complementary strategies and decorrelated from each other such as ABS / MBS arbitrage, CLO arbitrage, convertible bond arbitrage, credit arbitrage, interest rate arbitrage or even merger / acquisition (M&A) arbitrage. Important diversification, complementary features of developed specialties together with a meticulous risk management process allowed the underlying to behave well during the 2008 and 2011 financial crisis and to exploit market opportunities during these periods. In 2020, the health crisis linked to COVID-19 has led to a dislocation of the markets and temporarily affected the Stork DMS, but it has once again shown its resilience. The quality of the portfolios put in place; the strong diversification and the low duration of the strategies have indeed enabled the Stork DMS to rebound after the drawdown of March, periods of strong movements being proper to find arbitrage opportunity to generate returns for the following months and years. It is therefore important to report the performance objectives' of the underlying to the recommended holding period of the underlying fund and the Note.

Advantages / Drawbacks

Secondary market

Advantages

- **Diversify your investment** and benefit from a **performance weakly correlated to variations in traditional asset classes** ;
- **Benefit from the expertise** of **CIC Marchés** and **Cigogne Management SA** in alternative investment ;
- **Diversify your investment** accross a variety of compartments ;
- Benefit from market inefficiencies ;
- Benefit from the **75% notional guarantee by CIC at maturity date.**

Drawbacks

- The CPPI technique can lead to **different performances between the Note and the underlying fund** ;
